The State of Strategic Portfolio Management: 2026 Global Trends

Strategic Portfolio Management is becoming central to enterprise resilience as AI investment accelerates and planning cycles compress. The 2026 Global SPM Trends Report examines how leading organizations strengthen governance, reduce siloed data, and connect strategy to execution with discipline. Explore how mature SPM practices help leaders prioritize with clarity, manage total cost of ownership, and deliver measurable gains that stand up to scrutiny.

[Learn More](#)

SPM Is Critical, but Execution Is Broken

Strategic Portfolio Management ranks as a top enterprise priority, yet only 44 percent of organizations believe their SPM processes are effective. New research reveals how fragmented data, siloed systems, and weak financial oversight are undermining execution, even for high profile AI initiatives. Explore what leading organizations are doing to unify data, strengthen governance, and turn strategy into measurable outcomes.

In Strategic Portfolio Management, Visibility is the Key to Unlocking AI's Potential

Strategic Portfolio Management is widely seen as critical, yet fewer than half of organizations believe their processes are effective. In this SD Times article, Brian Nathanson, Head of Product Management for Clarity, explains why siloed data and limited visibility are holding enterprises back and why AI is not a shortcut. Learn why data inventory and portfolio transparency are essential to turning AI ambition into measurable results.
